

RESEARCH BREAKTHROUGHS AND SOCIAL IMPACT SYNTHETIC BIOLOGY BULLSHIT

BINGO!!

Bingo!

UNBELIEVABLE !!!

Members of the public do not have the expertise to understand Syn Bio's real issues.	We should avoid another GMO controversy. We have nothing to learn from it.	Taking something apart is the better way to understand it.	The main role of ethical expertise is to democratize Syn Bio's benefits through consensus-building.	Biology is a technology, micro-organisms are tools, therefore bacteria are our bitches!
DNA is a code, life is a computer, therefore biology is a computer science.	Public debate should be about balancing benefits, costs and risks.	Ethicists are just here to tell us that we should do, they put boundaries to our creativity.	Medical applications are the most acceptable element of Syn Bio.	Syn Bio is a emerging technology, result-driven and focused on social impact.
Science policy and Syn Bio regulation should be evidence-based.	Economic growth and nation competitiveness depend on transformative and strategic technological developments.	ARE THE ETHICAL CONCERNS ADDRESSED? YES. MOVE ON. DO YOUR RESEARCH!	Syn Bio applications are near-future transformative and revolutionary.	As a scientist I would like to explain to you...
Technology is just an empowering tool. It is neither good nor bad.	In the wrong hands Syn Bio will destroy our planet	A vibrant generation of young scientists open to debate	A national moratorium on a genetic technology is worthless, China will develop it anyway.	Debating science and technology is about bringing a number of experts to the table.
Politics, political debates and words in general are a deception. Technology is the mean for social change.	With great power comes great responsibility.	With technology every individual can be an actor of change, yes go individual!	The public actually wants Syn Bio. Critics are a radical minority therefore they do not count.	In the right hands Syn Bio will save the world

BINGO!!

BINGO!!

BINGO!!

WOAHHHHH
What a bullshit!!

MONSANTO

BINGO!!

BINGO!!

This bioeconomy is a bingoeconomy
My labour and environment are not Syn bio's playground

SCRE...

YOU!!!

EEWW...

BINGO!!

BINGO!!
